Issue:

ANNUAL NATURAL GAS CONSUMPTION APPLIANCE BY REGION - 2016

(Mcf)

Findings

- As temperatures drop, demand for natural gas space heating rises. US residential furnaces consumed an average of 36 Mcf per year, more than the rest of household appliances combined.
- Variations in regional climates across the country account for the impact weather has on natural gas demand. The coldest region, New England, consumed the most, while demand was the lowest in the Pacific region.
