

TR Number	2019-41
Primary	192.67
Secondary	{G-192-17}
Purpose	Review existing GM and revise as appropriate in light of Amendment 192-125.
Origin/Rationale	Amdt. 192-125
Assigned to	Design

Note: Revisions are shown in yellow highlight and red font.

SECTION 192.67

~~*This guide material is under review following Amendment 192-125.*~~

~~*Note: In Amendment 192-125, former §192.67 language titled “Storage and handling of plastic pipe and associated components” was renumbered to §192.69.*~~

1 SCOPE

- ~~*(a) The material records requirements under §192.67 apply to steel pipelines in transmission, offshore, and Type A gathering systems (see §192.9(c)).*~~
- ~~*(b) Operators of Type B and Type C gathering lines are exempt from the requirements of this section (see §192.9(d) and (e)).*~~
- ~~*(c) Operators of distribution systems, Type B gathering lines, and Type C gathering lines might consider the following guidance for records.*~~

2 RECORDS

- ~~*(a) The operator should review the pipe specifications used at the time of manufacture to identify the required records.*~~
- ~~*(b) The operators should retain records beyond the minimum requirements of the manufacturing standard (e.g., contract specifications, manufacturing inspection records, manufacturing process).*~~
- ~~*(c) When pipe material records identified under §192.67(b) are discovered or generated through a material properties verification process, they must be retained for the life of the pipeline. These records should be included in the operator’s permanent documentation to support the determination of the MAOP and included in the threat analysis of the operator’s integrity management program.*~~
- ~~*(d) Operators should consider reviewing past project documentation for records that meet the minimum requirements of this section.*~~
- ~~*(e) Discovered records should be reviewed for accuracy and relevancy. Historical material records and field inspection records should be confirmed with other complementary or supporting documents, when applicable.*~~
- ~~*(f) Material records should be used to select or develop appropriate welding procedures.*~~
- ~~*(g) Records can be maintained at a central location or at multiple locations for the operational life of the pipe.*~~
- ~~*(h) Records can be maintained either electronically, as paper copies, or in any other appropriate format.*~~
- ~~*(i) Operators should consider implementing recommendations from API RP 5MT, “Pipeline Inspection Documents for Material Traceability and Electronic Test Reports.”*~~
- ~~*(j) See guide material under §192.205 for records on component materials.*~~
- ~~*(k) See guide material under §§192.607 and 192.624 for pipelines lacking complete material records.*~~

GMA G-192-1

GUIDE MATERIAL APPENDIX G-192-1

[Editorial note: Adding entry to G-192-1 that was missed before.]

1.14 OTHER DOCUMENTS		
API RP 5MT	Pipeline Inspection Documents for Material Traceability and Electronic Test Reports	§192.67

GMA G-192-17

GUIDE MATERIAL APPENDIX G-192-17

(See Part 191 and guide material under §§192.13, 192.603, 192.941, and 192.947)
