

AGA Data Statistics Visualization Tool

The **Statistics Data Visualization Tool** is a new way to explore AGA's natural gas industry data through an interactive, easy-to-use format that makes key trends and insights clearer. Using AGA's extensive data catalogue, this tool brings statistics to life through fully customizable visual assets, including maps, histograms, graphs, charts and more.

What's in the tool?

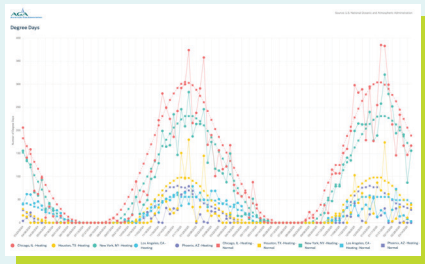

Supply and Infrastructure

The systems and assets that deliver natural gas – from production and storage to pipelines and distribution networks.

Efficiency and Environment

How natural gas is used effectively across the system, alongside efforts to reduce emissions and support environmental progress.

Market Fundamentals

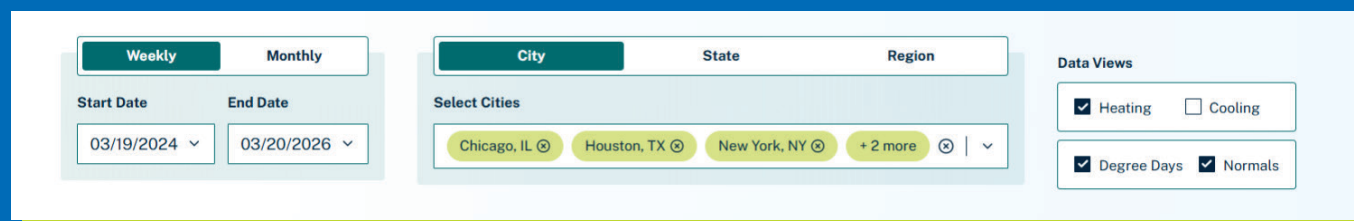

Core supply-and-demand dynamics shaping natural gas markets, including production, consumption, pricing, and seasonal trends.

Financial Performance

Key economic and business indicators, such as costs, revenues, and investment trends, that reflect the financial health of the natural gas industry.

How do I use it?

Pick from any one of our 20+ industry level data sets, and build a visualization tailored to your specific needs, choosing relevant regions, timeframes, utility or customer type, and other parameters to fit your use case. You can even download the full dataset to make your own visualizations.

Where do I find it?

Access the tool at gasfacts.aga.org.

Questions? You can email info.gasfacts@aga.org for more information.
