7 RECORDS

7.1 Compliance records.

Records demonstrating compliance with operator procedures and the regulations should be kept for the life of the pipeline. These include the following.

(a) Identification of segments.

(1) Class location survey (see guide material under §192.5). *{Editorial Note: GM under §192.5 from TR 18-28 is in 2025 Edition of the Guide.}*

(2) MCA identification (see §192.3 for definition of *moderate consequence areas*).

(3) Records used to determine % SMYS – (see guide material glossary under §192.3 for *Percent of SMYS (% SMYS)*). *{Editorial Note: Glossary term added by TR 21-40, which is approved to Public Review – see TR 21-40.}*

(b) Assessment method selection (type).

(1) Threat determination (see guide material under §192.917).

(2) Selected assessment method (see guide material under §192.921).

(c) Assessment schedule including rationale and completion.

Risk-based prioritization schedule methodology, such as the prioritization factors that were considered. Factors to consider may have included:

(1) Percent of SMYS (% SMYS).

(2) System history.

(3) Construction activity.

(4) Industry events.

(5) ~~Section 192.710 required assessment segment P~~opulation density.

(d) Assessment completions including dates performed, analysis of results, and discovery of condition.

7.2 Repair records.

The date, location, and description of pipe repairs made must be retained for the life of the pipeline (§192.709(a)). Repairs to non-pipe components must be retained in accordance with §192.709(b) and (c).

7.3 *Records format.*

Although not prescriptively required, operators may consider maintaining records in similar format as Subpart O documents.
